

CASE STUDY: EDUCATION & NOT-FOR-PROFIT

# A NATIONAL ROLLOUT IN 3 WEEKS, ZERO TRAINING REQUIRED

## CHALLENGE

Regulatory changes meant the organisation urgently needed a system to track student sign-in/sign-out across nationwide programs.

But the real complexity was not just the tech. It was the people. The workforce was largely non-technical, decentralised, and short on time. Any solution had to be simple, fast, and frictionless.

## SOLUTION

ThunderLabs deployed a strike team to co-design the solution with frontline workers. Within 3 weeks, a working system was live in the field, processing real data with zero training required.

The intuitive interface meant even low-tech volunteers could use it instantly. Following a successful pilot, our strike team worked with internal teams to integrate the solution and scale it for national rollout.

## RESULT

- First version live and operational in just 3 weeks
- Zero-training deployment adopted by a dispersed, volunteer-heavy workforce
- Fully integrated and scaled nationally in partnership with internal IT
- Seamless compliance with new regulatory requirements

## CALL US

**Compliance moves fast.** Your tech team should too. Get in touch with ThunderLabs.
